## CATTLE HEALTH

Nationwide Artificial Breeders and passed to a minimum standard for a natural service.

- All sale bulls have been vaccinated and tested for Pestivirus
- All sale bulls have been 7 in 1 Vaccinated
- All sale bulls have been Vibro Vaccinated
- All sale bulls will be drenched prior to sale
- All sale bulls will have been semen tested prior to sale by Drew Pickford
- All sale bulls will be treated with Rhinogard IBR

## INSURANCE

Riddellvue recommends that you insure your new purchase for 6 months.

Please ask Agents for any insurance requirements.

## GUARANTEE

All bulls have been assessed for structural soundness and fertility evaluated, To the best of our knowledge the bulls offered are in sound working order as at the time of sale. If during the next 12 months, a bull breaks down due to a reason other than illness, Injury or disease contracted after leaving Riddellvue Angus, we will:

1. Look to provide a mutually agreed upon replacement as quickly as practicable,

OR if replacement is not possible;

2. We will issue a refund equal to the purchase value minus any salvage value. In some cases a veterinary report may be requested. The guarantee is for the value of the bull, without interest, costs or damages.

It is important to understand that normal care and good husbandry practices must be observed as replacement or a credit is not available if a bull is simply injured or dies for any other reason.

## INSPECTION

Bulls will be available for pre-sale inspection by private appointment and from 11am on sale day.

To arrange a time to view, please call Ian Bates on 0418 367 209.

## SAFETY

All sale bulls are quiet to handle under normal circumstances, however sale day places extra pressure on them, so please use caution and be alert of fighting bulls. Visitors enter the cattle pens at their own risk.

Children must not enter the bull pens.

## TRANSPORT

Riddellvue will arrange FREE DELIVERY of your purchase.

## OUTSIDE AGENTS

2% rebate paid to outside agents, introducing a buyer and settling within 7 days.

## Welcome to our 4th Annual Autumn Bull Sale and Female Sale

Well, what a crazy season it's been. After the "doom and gloomer's" trying to "put the wind up" everyone, it's probably been one of the best summer's we have had.

I wouldn't say the same about the prices, but things are steadily improving on this front. It's been a relief to see cattle prices rise to a pretty good spot to give the industry a bit more confidence.

We are excited with the lineup of bulls that will be on offer in this Autumn sale, with one of the feature sires being Ellingson Three Rivers 8064.

I selected this bull for our program because to me he's the type of bulls that we should be producing.

They carry themselves very well with a great rear end and structure with plenty of volume. Yes, they do have a bit of birth but they are shaped for calving ease and were the talk at Beef Week.

We as producers need to understand that there's not much difference between a 4 and a 7 in birth weight, it probably calculates to 3-4 kg in a calf.

I know that I would have calving range from 28 to 45 with an odd one over that and that is how I put them in the book, so 3-4 kg isn't a lot when calving.

The environment and structure of the bull have a greater impact on calving than the birth weight of the bull.

One of the other feature sires is Baldrige Alternative E125. He has a lot behind him in the gene pool with a good set of data along with great structure.

I feel these bulls will produce you great females and give you a good line up of steers.

We have introduced females into our sales to give producers a chance to secure great genetics out of the heart of our program.

There is a nice line up of 3-in-1 packages and a good group of heifers on offer. The females are only on offer on auction day and if passed in, they will go back into our program.

We always welcome everybody to drop in and check out our program and looking forward to seeing you all on sale day.

Regards,

*Ian & Dakra*

# Need top nutrition for production?

## Bio-Boost.... benefits no other fertiliser can offer!

22.5%  
Nitrogen  
5.85%  
Phosphorus  
9.01%  
Potassium

Bio-Boost delivers systemic NPK & Trace Elements economically!

**Bio-Boost Cal/Mag** is specially formulated for low Calcium/Magnesium soils to increase leaf size and productivity. Using a highly soluble source of calcium like Cal/Mag 5:1 can quickly remove harmful sodium salts from the root zone, establish valuable calcium, magnesium and nitrogen levels, provide proper nutrition for rapid recovery and vegetative regrowth.

*An excellent natural agent for fast pasture recovery.*

**Bio-Boost NPK Foliage Spray** is high in energy, with premium levels of Phosphorous, Nitrogen, Potassium and trace elements for good pasture or crop nutrition. Within seconds of application the spray starts to work systemically, helping to correct deficiencies and improve the health of pasture. *Reduces the need for supplements, helps with weight gain and productivity.*

**Bio-Boost NPK Foliage Spray** travels right to the roots to compensate soil 'lock-up' and deficiencies in pasture and crops.

Call 1800 809 229 for more info or visit [gfssolutions.com.au](http://gfssolutions.com.au)

## ARE YOUR STOCK REACHING THEIR FULL POTENTIAL?

### CONSIDER MEGATRACE

*Lack of Production, Poor Performance, and Health Constraints can often be attributed to missing nutrients.*

MegaTrace is a concentrated and chelated trace mineral supplement suitable for all livestock.

This complete all-in-one balanced liquid mineral package is a unique formulation of organically protected bio-available minerals in a seaweed base.

Trials have shown that can MegaTrace can substantially improve the general health of your livestock

# AuctionsPlus

## How to Register and Bid on AuctionsPlus

1

Go to [www.auctionsplus.com.au](http://www.auctionsplus.com.au) to register at least 48 hours before the sale.

2

Select "**Sign Up**" in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select "**Dashboard**" and then select "**Request Approval to Buy**".

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: [info@auctionsplus.com.au](mailto:info@auctionsplus.com.au)

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF. LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY AND SUCCESS WITHIN YOUR BREEDING HERD.

## PURCHASE

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

## DELIVERY

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

## IF YOU USE A PROFESSIONAL CARRIER:

- Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

## ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

PURCHASE

DELIVERY  
MANAGING OLDER HERD BULL

AFTER PURCHASE TIPS  
DURING MATING

ARRIVAL

MATING NEW YOUNG BULLS  
NORTHERN AUSTRALIA

# BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

## MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

## MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

## DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

## NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

## ADAPTATION

The key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

## CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

Information is provided by the Department of Primary Industries NSW. For further information visit the DPI web site: [www.dpi.nsw.gov.au](http://www.dpi.nsw.gov.au), or [www.angusaustralia.com.au](http://www.angusaustralia.com.au). Further reading - Buying Angus Bulls
